(テーマ)

Climate Change and its Effect on Wildlife Today

*テーマの文字サイズは 12pt、太字で、センタリングし、下線を引くこと。*独自のタイトルをつけず、出題されているテーマと同一とすること。

Abstract

*概要は、100～150words(末尾カッコ内に概要の語数を記載)で、文字サイズは12ptとし、ダブルスペースで書くこと。

(概要)

Researchers find that climate change remains a serious challenge for the existence of the entire planet. One major effect of global warming is the manner in which it has reduced the number of living species on Earth. According to the World Wildlife Federation (2020), due to the large changes in climate patterns (e.g., variations in rainfall, rising temperatures), living species have been pressured to migrate so they can find more favorable places to live. Unfortunately, these patterns have also driven living species to become extinct. In this presentation, background will be provided about the current climate crisis and its effect on global wildlife. Then, the survival strategies of specific types of species will be discussed. Finally, solutions will be explored to ensure that living species can be preserved despite of these environmental problems.
